STC Houston October Meeting: Sharpen Usability Knowledge To Stay In Demand

HOUSTON – With communication technology advancing at record speed, career opportunities for information developers are changing and expanding for those who continue to build their skill sets. One of the hottest topics today is usability. Become a user advocate through learning user-centered graphical user interface (GUI) design principles. Attend the next STC meeting Tuesday, October 12, 2004, for a chance to hear Susan Tacker deliver key usability information that can keep your skills sharp and in demand.

Susan Tacker began reporting on the embryonic online information services industry in 1987. She earned a BA in English from East Carolina University and a MS in Journalism from Ohio University. She currently manages the Information Development team for security products at NetIQ Corporation, where she has worked on the Security Manager team since its inception. Susan has presented sessions on usability, online information, and management issues at STC annual conferences, and her work has won awards at the local and international levels.

Join Susan Tacker and STC Houston chapter members Tuesday, October 12, at the Hilton Houston Westchase Hotel, 9999 Westheimer Road, starting at 5:30 p.m. for informal networking and refreshments. Tacker's presentation begins at 6:30 p.m. To reserve your place at this event, go to <http://www.stc-houston.org/>.

STC Houston meets on the second Tuesday of each month, October through June. STC is the world's largest professional association for technical communicators providing unparalleled opportunities for continuing education, peer networking, and access to its job openings database. For more information about the international organization, visit <http://www.stc.org/>.
